

One Management

One Management (OM) is a technology platform designed for the management for vehicles and visitors in residential estates.

Vehicle management

Using advance AI supported license plate recognition, OM can efficiently detect and control vehicle access into the building.

OM tracks vehicle movements in and out of the building and flags overstaying vehicles. Access timings can be provided for pre-registered & ad-hoc registered vehicles.

Violators can be blacklisted for entry!

Guest vehicle invitation

Guest vehicles can now be invited with a single click on OM community app.

With just license plate number and invitation date submitted on the app, guest vehicles can now get automated & secure entry to the building.

Hosts are notified of their guests' arrival upon entry.

Visitor management

Unregistered walk-in visitors can simply dial in the unit number on the OM intercom panel to speak to their host.

Pre-registered guests can simply scan the QR code shared by their host from the OM community app on the OM intercom panel to get entry access.

Future proofing access technology

OM uses latest internet technologies to automate access control in buildings. Using state-of-the-art cloud platform, all OM devices store data on the cloud and thus are easy to maintain and replace.

OM devices have self-diagnostic capability that can alert the maintenance & support teams in the event there is a breakdown to any of the devices.

Fast. Reliable. Scalable.

Man power reduction

OM allows buildings to fully automate vehicle and visitor access without having to go through physical security.

Enhanced security

With end-to-end tracking and traceability, OM provides heightened security at buildings.

Save time. Save costs.

Better Management

OM provides all-in one management of both vehicles and visitor entry access.

Efficient management of access rights and privileges.

“Reduce reliance on physical security”

Command center operation

With OM, security companies have complete visibility on visitor and vehicle access to the buildings even from remote locations.

This allows 24x7 monitoring and surveillance for buildings.

No more security downtime!

Multiple estate management

OM allows security companies to manage OM devices in multiple estates.

Gain more productivity!
